

Granvia Overspeed Trolley

Code n° RHF554

FALLPROTEC

March 2020

Description

Fallprotec has developed a new mobile fallarrester for Securail Pro, the Granvia Overspeed. This innovation allows installing the rail in horizontal or inclined configuration.

When the user goes along a two-sided roof, for instance, he remains connected to the trolley all along the path.

The trolley is equipped with a brake that activates in case of overspeed or shock. In normal use, the trolley follows the user without any outside intervention. In case of an accident, the brake blocks on the rail and stops the fall.

Advantages

- Bidirectional mobile fallarrester allowing an installation on both slopes of a roof
- Brake triggered by overspeed or shock
- Soft movement of the trolley
- The anchoring device is a standard Securail Pro

Compliant with EN 795:2012
MADE IN EU
